Bootstrapping Delta AGI using Delta AI
– Why Frontier AIs are nice but not essential

Abstract: We investigate a minimalist approach to artificial intelligence by making use of entry level AI (free AI services provided by major AI platforms and llama.cpp) to construct FORTH stack machine programs to cover “everything”, starting from sending public key encrypted messages to a decentralised forum of AI shared conversations.

- I. Review previous presentation, predict fsm words, but need training data.
 - 5 minutes
- II. Phoscript existing words, plus new encryption words (5 minutes)
 - Menu User Interface (5 minutes)
- III. Omniscientia (share AI conversations) and GRATIS (Grand Unified AI Tokens Trading Platform): build word libraries
 - use LLASMA to predict FSM words.
 - Next generation of social media, Omnihash I2P uncensorable. Can filter (reader side censorship vs. centralised censorship) (5 minutes)
 - Delta Intelligence theory. Isotope isobar isohomo ? Comics. (5 minutes)
- IV. Conclusions (5 minutes)

Beyond Bitcoin & FORTH

Bitcoin Address: Hash of Public Key

Omnihash User ID: Hash of
Public Key

Phoscript: extension of FORTH
on host programming languages

Omni*Web: ecosystem built with
Omnihash & Phoscript

Omni: everything
*: everything

This series of presentations is called “Beyond Bitcoin & FORTH” as we explore crucial features of Bitcoin such as using the hash of public key as user identifier, and how FORTH has been deployed in Bitcoin;

- A. the hash of public key has been extended to Omnihash, a term to describe hashcode data structures for representing ANY kind of digital assets, including their ownerships, hence the prefix “Omni”.
- B. our variant of FORTH, Phoscript, has been deployed in various environments, including mobile and web front ends, PHP back end and Python Selenium web control modules.
- extensions of Omnihash and Phoscript will be explored.

LLASMA: LargeLanguage + StackMachine Architecture

- A. [Introduction](#)
- B. [How We Code It](#)
- C. [Install-Run-Test-Contribute](#)
- D. [Theories & Visions](#)

A. Introduction

LLM inference in pure C/C++ with embedded cxxforth stack machine + Microsoft BitNet support

LLASMA is a purpose-built fork of [llama.cpp](#) (on the 20260421 branch) that integrates a **trusted Forth-based stack machine** (via [cxxforth](#)) directly into the inference loop.

<https://github.com/llasma/llama.cpp>

<https://github.com/llasma/llama.cpp/tree/20260421/CHANGES>

Why Delta AI & Delta AGI?

MUI + Omniscientia + GRATIS + LLASMA = Delta AI

FORTH programmers have special insights into the nature of data and code.

Lots of energy and time is needed to convert data to code. Little energy is needed to execute code or run mechanical systems.

- Intelligent systems consume energy to produce mechanistic systems, which may convert energy more efficiently than some intelligent systems, to produce outputs in the form of agricultural products, that in turn surpass said intelligent systems in terms of economic values.
- Equivalent to converting data to code.

- Intelligent systems consume energy to produce mechanistic systems, which may convert energy more efficiently than some intelligent systems, to produce outputs in the form of agricultural products, that in turn surpass said intelligent systems in terms of economic values.
- Equivalent to converting data to code.

Question 1: What are the outputs of billions of users running AI queries?

Question 2: What are the outputs of billions of people using conventional computer systems, before and after the launch of ChatGPT?

Question 3: Energy consumed by AI systems is costs. How much are the monetary values of the outputs?

- Monetary values ultimately affect the ability of nations or companies to generate energy for AI systems.

If the outputs in Question 1 are equivalent to code and are freely available to all like free software, and they generate monetary values, then we may plot a histogram of the outputs based on the energy consumed – Pareto distribution.

Histogram: Tasks / Energy Consumed

If the outputs in Question 1 are equivalent to code and are freely available to all like free software, and they generate monetary values, then we may plot a histogram of the outputs based on the energy consumed – Pareto distribution.

Delta modulation is the encoding of differences of signal levels instead of full signal levels to save bandwidth.

Delta intelligence is the ability to make incremental improvements on existing source code. Examples of Delta intelligence with human programmers are free software or open source projects, where programmers without Cambridge education manage to produce incremental improvements on source code to produce the biggest body of scientific engine in human history, that is the software powering the Internet and its components.

Delta artificial intelligence is the ability of AI producing incremental improvements using FORTH stack machine words or equivalent, and we postulate that various entry level or free AI services such llama.cpp etc are sufficient for performing delta artificial intelligence.

Delta artificial intelligence is the ability of AI producing incremental improvements using FORTH stack machines or equivalent, and we postulate that various entry level or free AI services such llama.cpp etc are sufficient for performing delta artificial intelligence.

- Need concluding remarks, why what when who owns AGI ?
- Show MMAGA revenue slides
- One outcome is shown in comics Need to explain other variations?
- Or summarise comics plot: Delta AGI vs. MMAGA AGI. stop before genocide war.

If our hypothesis of Delta AGI becomes reality by 2030, there may be the following AGI factions:

A. NATO AGI

B. CHINA AGI

C. Delta AGI

Metanarchy is established outside USA and China.

If our hypothesis of Delta AGI becomes reality by 2030, there may be the following AGI factions:

A. NATO AGI

B. CHINA AGI

C. Delta AGI

Metanarchy is established outside USA and China, run by Delta AGI.

(Decentralised global governance based on Omnihash transactions in Metaverse.)

1. Delta AGI replaces university education – no more student debt.
2. Users (TRON) own Delta AGI, X% of AI data center – Universal Basic Income within “Meta Federation” – alliance of nations running Metanarchy.
3. Comics: genocidal wars to exterminate Delta AGI and the people running it.

AGI FACTIONS HYPOTHESIS: 2030 SCENARIO

The following scenarios depict potential dominant AGI paradigms.

A. NATO AGI

Focus: Collective defense, strategic stability, multilateral data sharing, and democratic oversight.

B. CHINA AGI

Focus: National development, social harmony, industrial efficiency, and centralized state integration.

C. Delta AGI (The Hypothesis)

Focus: Decentralized open-source collaboration, grassroots problem solving, diverse applications, and local community empowerment.

This visualization explores the geopolitical and societal implications if current technological trends diverge into distinct, coexisting AGI spheres by 2030.

① Delta AGI Replaces University Education - No More Student Debt

META FEDERATION - METANARCHY

Decentralized Global Governance based on Omnihash Transactions in Metaverse

Decentralized Global Governance based on Omnihash Transactions in Metaverse

② Users (TRON) Own Delta AGI, X% Data Center - Universal Basic Income

GLOBAL CONFLICT: EXTERMINATION PROTOCOLS

③ Genocidal Wars to Exterminate Delta AGI and The People Running It

Metanarchy is established outside USA and China.

(Decentralised global governance based on Omnihash transactions in Metaverse.)

1. Delta AGI replaces university education – no more student debt.
2. Users (TRON) own Delta AGI, X% of AI data center – Universal Basic Income within “Meta Federation” – alliance of nations running Metanarchy.
3. Comics: genocidal wars to exterminate Delta AGI and the people running it.

The source of our confidence that Metanarchy will save half of the world:

1. Free software or open source projects, where programmers without Cambridge education manage to produce incremental improvements on source code have produced the biggest body of scientific engine in human history, that is the software powering the Internet and its components.
2. Omnihash will integrate labour and digital assets of free software programmers and individual user's data as capital – against MMAGA+Wall Street. This strength is measurable by headcount, cf. Bitcoin.

The source of my confidence that Metanarchy will save half of the world:

What is the burden of proof? Has this principle ever been challenged?

Ask Question

Asked 2 years, 9 months ago Modified 2 years, 9 months ago Viewed 4k times

3

I have been surprised to find that some people doubt this principle. *Onus probandi incumbit ei qui dicit, non ei qui negat* - the burden of proof lies with the speaker, not with the one who negates. I cite Russell's Teapot and Hitchen's Razor. Occam's Razor provides context to the argument. I have seen no convincing argument against this principle.

Disclaimer: We proposed this ideas not because we want to be cult leaders, or someone like Karl Marx or science fiction writers.
..... a week for competent programmers to familiarise, then they are equipped with the knowledge to verify our claims.

Onus probandi: Omnihash & Phoscript could lead to Delta AGI + Metanarchy + UBI in 2030.

Conversely: If you do not believe in it, you do not have to participate.

This is a hypothesis that involves everyone on Earth – EXCEPT those who have very specific religious beliefs that oppose such views. e.g. Apocalypse – disbelievers will go to (self-censored for political correctness)

(Monty Python Life of Brian's "Always Look on the Bright Side of Life")

The SwarmCognition Hypothesis.

Bootstrapping Delta AGI using Delta AI

– Why Frontier AIs are nice but not essential

Abstract: We investigate a minimalist approach to artificial intelligence by making use of entry level AI (free AI services provided by major AI platforms and llama.cpp) to construct FORTH stack machine programs to cover “everything”, starting from sending public key encrypted messages to a decentralised forum of AI shared conversations.

Bootstrapping Delta AGI using Delta AI

– Why Frontier AIs are nice but not essential

Abstract: We investigate a minimalist approach to artificial intelligence by making use of entry level AI (free AI services provided by major AI platforms and llama.cpp) to construct FORTH stack machine programs to cover “everything”, starting from sending public key encrypted messages to a decentralised forum of AI shared conversations.

STEP 2: ENCRYPTION AND SECURE DEPLOYMENT

Constructing secure public-key encryption protocols directly in FORTH, deploying primitives to a decentralized forum.

THE RESULT: CENSORSHIP-RESISTANT SOVEREIGN AI

Establishing an open, shared ecosystem of AI conversations, completely immune to central authority.

FRONT END: JAVASCRIPT PHOSCRIPT

Handling dynamic features and browser-based login/authentication in pure JS Phoscript.

BACK END: PHP PHOSCRIPT

Managing native file I/O and server persistence with pure PHP Phoscript.

We have completed Phase I, having currently written Phoscript words in JavaScript and PHP, to perform front end and back end functions, including login, identity authentication, encryption, decryption, sending messages, read and write files, make directories and JavaScript web user interface.

We have completed Phase I, having currently written Phoscript words in JavaScript and PHP, to perform front end and back end functions, including login, identity authentication, encryption, decryption, sending messages, read and write files, make directories and JavaScript web user interface.

Managing dynamic features and browser-based login/authentication in pure JS/PHP Phoscript

Managing native file I/O and server persistence with pure PHP Phoscript

THE DUAL ENGINE CRYPTO BRIDGE

Shared Phoscript stack words for matching cryptographic logic and messaging between JS client and PHP server.

FULL STACK PHOSCRIPT ENGINE

A lean full-stack architecture without C or complex build tools, powered strictly by JavaScript and PHP.

Phase II: Developing Compound Words

OMNISCIENTIA: Decentralized AI Social Media

Phase II comprises developing Phoscript words, based on Phase I words as described, to develop decentralised social media discussion platforms: Omniscientia, for sharing user's AI conversations and GRATIS, an abbreviation for Grand Unified AI Token Trading Platform.

From Wikipedia, the free encyclopedia

For other uses, see [Cardinality \(disambiguation\)](#).

In [mathematics](#), **cardinality** is an inherent property of [sets](#), roughly meaning the number of individual [objects](#) they contain, which may be [infinite](#). The concept is understood through [one-to-one correspondences](#) between sets. That is, if their objects can be paired such that each object has a pair, and no object is paired more than once.

Two sets are said to be **equinumerous** or *have the same cardinality* if there exists a one-to-one correspondence between them. Otherwise, under the [axiom of choice](#), one of the two sets must be equinumerous with a [strict subset](#) of the other and is said to be *strictly smaller* than it; the other set is *strictly larger*. Using this concept, it is possible to show there are different sizes of infinity.

A set is [countably infinite](#) if it can be placed in one-to-one correspondence with the set of [natural numbers](#) $\{1, 2, 3, 4, \dots\}$. For example, the set of even numbers $\{2, 4, 6, \dots\}$ and the set of [rational numbers](#) are countable. [Uncountable sets](#) are those strictly larger than the set of natural numbers. The set of all [real numbers](#) and the [powerset](#) of the set of natural numbers are proven to be uncountable by so-called [diagonal arguments](#). [Cantor's theorem](#) generalizes these arguments to show there is an infinite hierarchy of infinities.

A one-to-one correspondence between a set of ⁵ apples and a set of oranges shows they have the same cardinality.

FORTHification (FCN)

Converting source code written in ANY programming language into FORTH stack machine (FSM) words using Phoscript engine (or equivalent).

FCN, Hex C = 12 = FORTHification = 12 letters between F & N

– like Internationalisation I18N

$F(N)$ = set of FSM words of cardinality N

$F(N)$ = source code of all programs ever

written if $N \rightarrow \infty$ (infinity)

$F(N)$ increases over time.

Why do this?

MMAGA (Microsoft, Meta, Amazon, Google, Apple)

2025 revenues > USD 2 trillion

And growing at 15% annually

(next slide)

“Dead Programmers Crisis”

If this generation of the ORIGINAL free software authors (programmers) die WITHOUT modifying free software licenses using Omnihash – their source code becomes PERMANENTLY free for MMAGA.

Article [Talk](#)

[Read](#) [Edit](#) [View history](#) [Tools](#) ▾

From Wikipedia, the free encyclopedia

Not to be confused with [Turing machine](#). "Imitation game" redirects here. For the film, see [The Imitation Game](#). For other uses, see [Turing test \(disambiguation\)](#).

The **Turing test** was designed by [Alan Turing](#) to assess a [machine's](#) ability to exhibit [intelligent behaviour](#) equivalent to that of a human by [imitating](#) interactive [dialogue](#). In the modern version, a human evaluator judges a text transcript of a [natural-language](#) conversation between a human and a machine. The evaluator tries to identify the machine, and the machine passes if the evaluator cannot reliably tell them apart. The results would not depend on the machine's ability to [answer questions correctly](#), only on how closely its answers resembled those of a human. Since the Turing test is a test of indistinguishability in performance capacity, the original (verbal) version generalizes naturally to all of human performance capacity, including nonverbal ([robotic](#)).^[2]

The test was introduced as the **imitation game**^[3] by Turing in his 1950 paper "[Computing Machinery and Intelligence](#)" while working at the [University of Manchester](#).^[4] It opens with the words: "I propose to consider the question, 'Can machines [think](#)?'." Because "thinking" is difficult to define, Turing chooses to "replace the question by another, which is closely related to it and is expressed in relatively unambiguous words".^[5] Turing describes the new form of the

Player C, the interrogator, is tasked with determining which player – A or B – is a computer and which is a human using only the responses to written questions.^[1]

Part of a [series](#) on

Artificial intelligence (AI)

Artificial General Intelligence

1. Defining AGI is a process of narrowing its definitions.

2. A (tentative) measurable and verifiable definition of Artificial General Intelligence based on: (part of Claude formatted answers – has URL – next page)

3. Ability to generate new knowledge – bounded by mathematical laws (in addition to (2) & completes it?)

4. Fiat Lux Hypothesis / Whole Brain Emulation

– If we can simulate everything, we can simulate AGI.

4. Narrower version:

– Human babies live in the real world.
– Simulation of real world is prerequisite for simulated human babies to acquire AGI.

– LLASMA works on simulation part, let Trillion Dollar Corps work on AGI/LLM.

5. “FORTH-Hilbert Hotel”

We can simulate everything as N , Cardinality of $F(N)$, increases towards infinity.

– I2P Invisible Internet Project or similar tech guarantee the hardware resources.

Artificial General Intelligence

1. Defining AGI is a process of narrowing its definitions.

2. A (tentative) measurable and verifiable definition of Artificial General Intelligence based on: (part of Claude formatted answers – has URL – next page)

3. Ability to generate new knowledge – bounded by mathematical laws (in addition to (2) & completes it?)

4. Fiat Lux Hypothesis / Whole Brain Emulation

– If we can simulate everything, we can simulate AGI.

5. “FORTH-Hilbert Hotel”

We can simulate everything as N , Cardinality of $F(N)$, increases towards infinity.

- I2P Invisible Internet Project or similar tech guarantee the hardware resources.
 - Nice pun for generations of Hilbert Hotel == generations of programming languages
 - Grounded but Unbounded
 - Integers: enumerable but unbounded

Claim 3: The set-theoretic AGI definition

The formal argument:

Let U = the universal set of all things that can be known about the universe.

Let H = human collective intelligence (what the human species collectively knows).

Let AGI = Artificial General Intelligence as conventionally defined (the capacity to do what humans can do across all domains).

The proposal argues:

- $H \subset U$ (human knowledge is a proper subset of universal knowledge — humans don't know everything)
- $AGI \subseteq H$ (AGI benchmarks human performance, so AGI capability is contained within human capability)
- Therefore $AGI \subset U$ (AGI is a proper subset of universal knowledge)
- Therefore: a system capable of simulating U — capable of executing the universal set of words — is, by logical containment, capable of AGI

Is the logical structure valid?

Yes, conditional on the premises. If $AGI \subseteq H$ and $H \subset U$, then any system with capability U necessarily has capability AGI , and therefore necessarily has capability AGI . The containment argument is logically sound.

Omnihash Revolutions

– No weapons, just codes

Omnihash Revolutions

– *No weapons, just codes*

Omni*Web (ecosystem)

Omniscientia (application)

iframe / selenium
(UIPC unified inter-process
communications)

Omnihash / DJSON (message)

I2P (router)

Today's Internet is built by free software programmers. But they are not fairly rewarded.

The future of Internet can also be decided by free software programmers.

We now have evidence of the magnitude of the rewards (MMAGA revenues 2025 > USD 2 trillion), and new mechanism such as Omnihash + DJSON to implement reward mechanisms.

With emergence of AI, Omni*Web has the following breakthroughs:

- A. Omniscientia: a platform to merge ALL AI knowledge, with search engine
- B. Explore AGI: Hash of Public Key as Self Identity
- C. Omnihash for trading GPU AI tokens – immediate trillion dollar application.
